Project Title:

[Online Examination Database System]

TA Name:

[Eng/ Mohamed Saeed
Eng/ Nour Mohamed]

Students' names:

ID Number

Name

1- Basmala Mahdy

24030169

Basmala Mahdy (Team Leader)

2- Solaf Mohamed

24030178

Solaf Mohamed

3- Menna Tallah

24030083

Menna Tallah Ahmed

4- Maram Emad

24030087

Maram Emad

5- Alaa Moustafa

24030088

Alaa Moustafa

6- Bilal Salem

24030198

Bilal Salem

Statement of Problem:

- Traditional exams take a long time to correct and manage. Manual work may cause errors and makes it hard to organize student data, especially with large numbers of students. Also, there is a need for a system that allows multiple users to access exams easily.

Brief Description of the
Project:

This project is an online exam system where students can log in and take exams. The admin can add questions and manage exams. The system will correct answers automatically and show results. It will support multiple users accessing the system through a network.

Objectives:	• Organize student and exam data • Reduce errors in correction • Show results quickly • Allow multiple users to access the system
Technical Approach:	• Use MySQL database • Design ER Diagram • Create tables (Users, Exams, Questions, Results) • Use SQL queries • The system will follow a simple client-server model • Multiple users can access the system through a network • A simple user interface will be developed for students and admin
Expected Deliverables:	• Complete database • ER Diagram • SQL scripts • Report • Presentation
